NAME
       CURLOPT_VERBOSE − set verbose mode on/off

SYNOPSIS
       #include <curl/curl.h>

       CURLcode curl_easy_setopt(CURL *handle, CURLOPT_VERBOSE, long onoff);

DESCRIPTION
       Set the *onoff* parameter to 1 to make the library display a lot of verbose information about its operations on
       this *handle*. Very useful for libcurl and/or protocol debugging and understanding. The verbose information
       will be sent to stderr, or the stream set with *CURLOPT_STDERR(3)*.

       You hardly ever want this set in production use, you will almost always want this when you debug/report
       problems.

       To also get all the protocol data sent and received, consider using the *CURLOPT_DEBUGFUNCTION(3)*.

DEFAULT
       0, meaning disabled.

PROTOCOLS
       All

EXAMPLE
       CURL *curl = curl_easy_init();
       if(curl) {
        curl_easy_setopt(curl, CURLOPT_URL, "http://example.com");

        /* ask libcurl to show us the verbose output */
        curl_easy_setopt(curl, CURLOPT_VERBOSE, 1L);

        /* Perform the request */
        curl_easy_perform(curl);
       }

AVAILABILITY
       Always

RETURN VALUE
       Returns CURLE_OK
